An Explanation of Rife Technology

Submitted By Tom Grbich

Essentially, in the 1920's Royal Raymond Rife (a genius second ONLY to Tesla), came to the conclusion that if everything is 'energy' (the ONLY thing no scientist will argue), then if you could find the life frequency of a pathogen, you should be able to blow it up by hitting it at that same frequency under power. The problem was… how do you prove it? So in 1929 he built the world's first microscope powerful enough to see a living cell. He placed cancerous tissue under the microscope and slowly turned the frequency knob on a small frequency generator until one day, the cancer cells got **extremely** agitated and then just literally "disintegrated."

Over the next (roughly)15 years, front page news items can still be found with some of the top health professionals of the time – lining up to get their pictures taken with Rife, and giving him accolades for the number of people he was curing of cancer. Then he began moving into other pathogens – causing the pharmaceutical companies to approach the government to advise that if it wanted to continue to receive the gravy train of money from them, then Rife needed to be shut down or he would put them out of business and so it was done. Sadly, Rife became so disillusioned with his own country that he became an alcoholic and died - pretty much penniless, around 1959.

Thankfully, like Tesla, while Rife was a genius in his work, he was not the best businessman, and his secrets were soon uncovered. The technology we work with today is light years ahead of what Rife had to work with in his time, so the effectiveness is CONSIDERABLY enhanced. Maintaining accurate frequencies with valve technology was almost impossible, with variations of up to 20% not at all unusual, Today, variations of less than half a percent are common, in well-designed units.

How it works is best defined by my explanation to a GP and his Surgeon wife who bought a unit some years ago. The husband had stage four prostate cancer and the wife had Erdheim Chester – an issue that the medical profession had no answer to. The wife was a total non-believer, so I asked her how she dealt with patients with kidney stones – did she operate? She said "No, she used ultrasound to blow the kidney-stone into small fragments that the kidney can safely pass." I replied, "So you're telling me that you use frequency (which is what the Rife machine is all about) to blow up something as hard as a kidney stone but… how come it doesn't damage the kidney?" She didn't know so I explained that frequency ONLY works on those frequencies that are exactly the same or… slightly above/below, and how MUCH above and below depends on the power being generated. I told her that as the kidney operates at an ENTIRELY different frequency than that of a kidney-stone, the kidney is unaffected. I then asked, "if she had seen something as hard as kidney- stones being blown up by frequency – why was it so hard to believe the same could be done with cancer?" She said, "I take your point," they bought a machine from me, and 6 months later I received a call from Maui. She said, "You're going to laugh – we're celebrating the fact that my husband is now cancer free, and I'm having panic attacks because we didn't bring the machine with us…"

You can also compare it to a microwave oven. As you know – you can put ANY "dry" material (other than metal) in a microwave and hit it with over a thousand watts (which is an ENORMOUS amount of power), and pretty much nothing will happen. DAMPEN that material however, and you have a WHOLE different ballgame. The reason being (and I was involved in the design of the first microwaves in NZ), that the magnetron, which generates the frequency in a microwave, is tuned ONLY to the frequency of water. Likewise the Rife Machine has a "bible" of frequencies for every potential target: microbial or cancerous.

From a purely scientific perspective therefore, it can be seen that if one has the RIGHT frequencies, it's IMPOSSIBLE for the machine NOT to work and equally, if you DON'T have the right frequencies then it is impossible FOR it to work. In the 21 years that I have been using Rife, I've had success with 13 different types of cancer, severe Parkinson's, Alzheimer's and Asperger's, multiple cardiovascular and gut issues, and more. And a client in Australia tells me she is now treating as many pets as she is people . . .

The Author

Tom Grbich was born in Winnipeg, Canada, taken to New Zealand as a 9 month old baby and raised there, returning to Canada in 2000. He began his career at age 18 in the RNZN, training as a radio technician to work on high powered radio transmitters and receivers, long range warning, gunnery, and navigation radar, and ultimately, Electronic Warfare.
Electronic Warfare not only involved learning jamming techniques etc., it also covered the effects of frequency on the body, mind, and weather. On discovering Royal Raymond Rife in 2006 Tom decided that healing might be nicer. He researched all of the machines on the market at the time, bought the one that he felt was technically best, and has successfully treated over 700 people in the past 21 years.
Tom is also a skilled martial artist and is the only (known) person in the world, to have replaced a body part – 10 inches of sigmoid colon in 2005
